

Title: "Device for Storing Goods"

Abstract: (no figures)

The invention refers to a device for storing goods, in particular vehicles, the goods being stored on at least one platform and the platform being guided on guides over a traverse path and means for traverse being provided. By means of the co-operation of the safety means arranged on the guide or device and the platform the platform is protected against undesired movement. The safety means are indicated by at least one locking unit and at least one locking element. The invention is characterised by the fact that the locking unit is rotatable and supported in such a way that the center of gravity of the locking unit is arranged off-center.
